- Today's merciless market does not leave production companies any space for delay, deadlock or poor quality
- Furthermore, in a market war companies must anticipate buyers' needs as well as competitors' and market trends
- Considering high demands on quality, speed of manufacture tasks and competitive prices of the products or services, the production process management becomes extremely important

Web*ERPINS is a modern business information system intended for managing business processes and traceability from inquiries for a service or a product to production resource assurance, initiating and monitoring the production process, quality assurance and product delivery. Many built-in functionalities significantly facilitate the everyday process of creating and tracking daily activities, and timely reporting.

The system is primarily intended for production and service companies that need to automate and integrate business processes, and efficiently manage business resources while generating the required supporting documents. In accordance with specific demands for various types, there are options for metal, electrical, chemical, casting and woodworking production, and service activities.

Benefits of web*ERPINS implementation:

Management and executive personnel

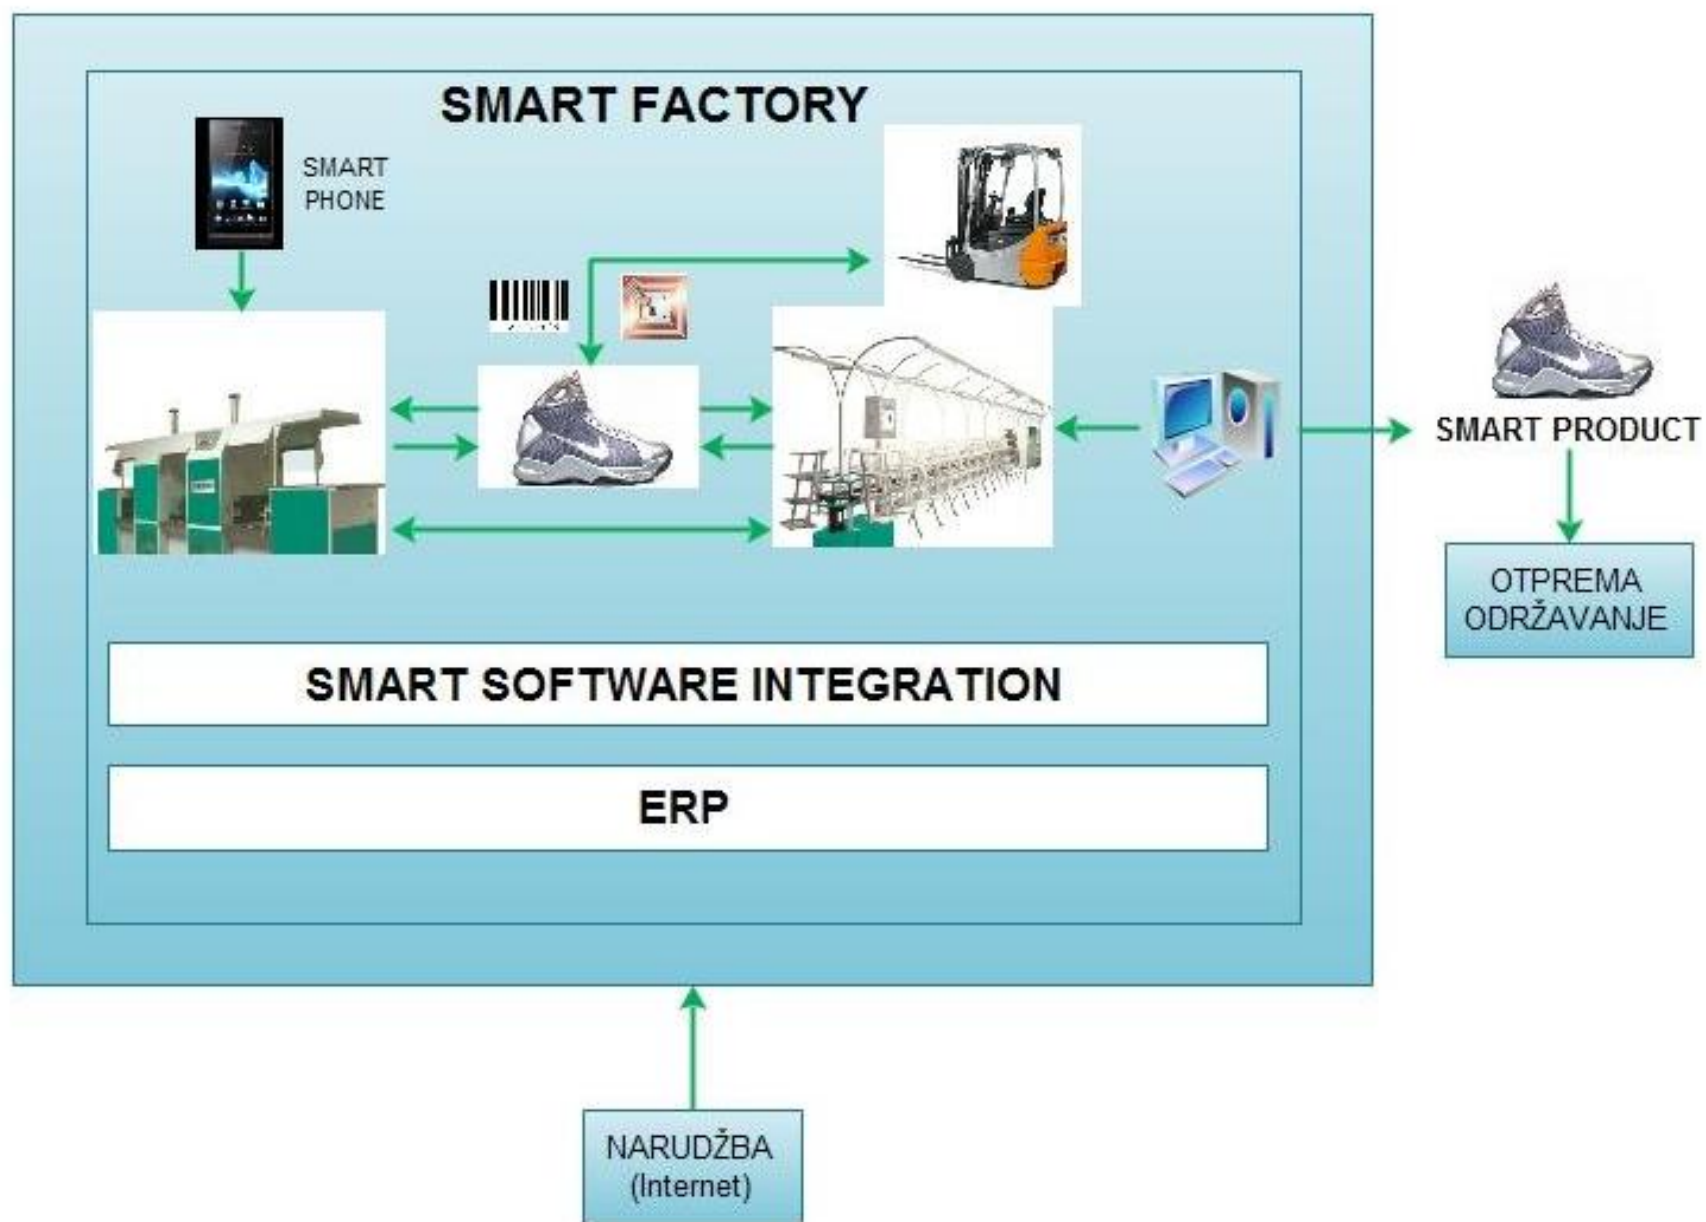

Managing business processes, financial and operation planning, alarms and problem solving support...

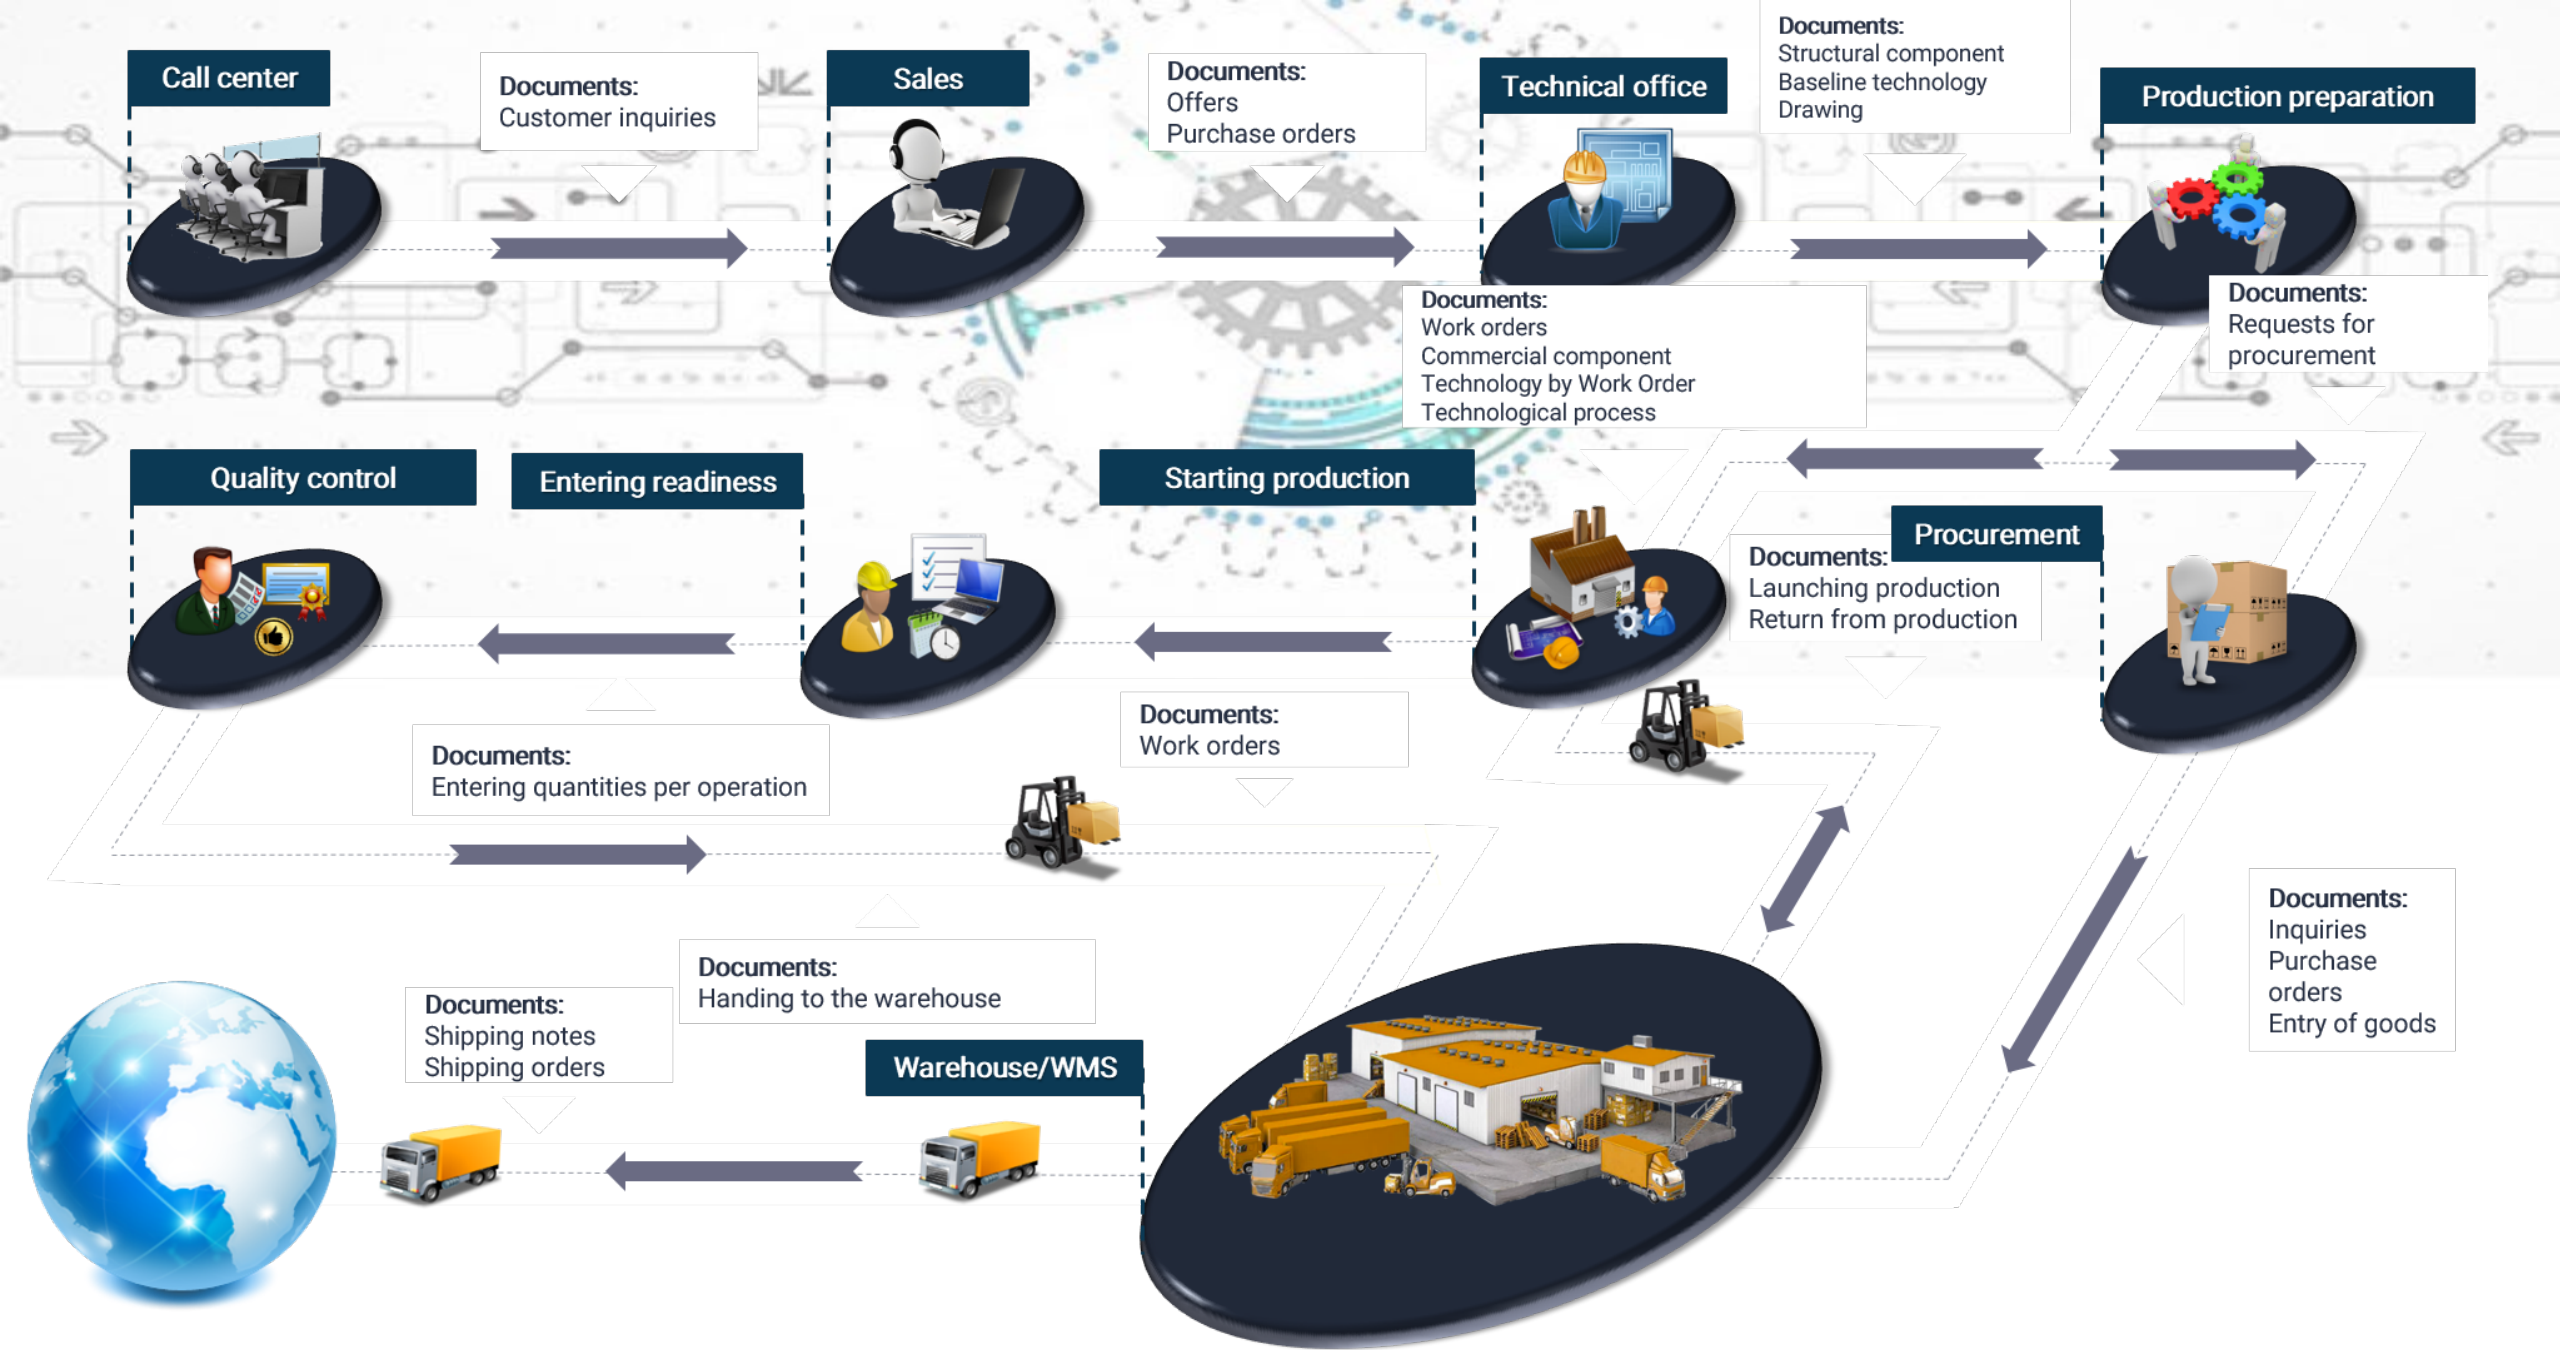

Employees – end activity performers

Business, production, and communication activity optimization – clear instructions, notes, procedures

Customers – product and service users

Product quality improvement, shorter deadlines and lower prices, simpler and better communication with the manufacturer, additional information, maintenance...
